Results are based on telephone interviews conducted January 14-16, 2011 with a random sample of 1,032 adults, aged 18+, living in the continental U.S., selected using random-digit dial sampling.

For results based on the total sample of national adults, one can say with 95% confidence that the margin of error is ±4 percentage points.

For results based on the sample of 516 national adults in Form A and 516 national adults in Form B, the maximum margins of sampling error are ±5 percentage points.

Interviews are conducted with respondents on landline telephones (for respondents with a landline telephone) and cellular phones (for respondents who are cell phone only). Each sample includes a minimum quota of 150 cell phone only respondents and 850 landline respondents, with additional minimum quotas among landline respondents for gender within region. Landline respondents are chosen at random within each household on the basis of which member had the most recent birthday.

Samples are weighted on the basis of age, sex, race, and Hispanic ethnicity to represent the U.S. adult population. The sampling error for the total sample is ±4 percentage points. The sampling error for the landline sample is ±5 percentage points. The sampling error for the cell phone sample is ±5 percentage points.

1. Do you think the U.S. is doing a good job of protecting the environment?
 Yes No Don't know
